EDUCATION

Nankai University, Tianjin, China

2019-2023(Expected)

B.Eng. in Information Security

Thesis: *Revisiting Frequency Smoothing Encryption: New Security Definitions and Efficient Constructions*

RESEARCH INTERESTS

Computer Security; Data Privacy; System Security; Formal Verification

EXPERIENCE

Encrypted Database

September 2020 - Present

Research Assistant Advised by: Prof. Zheli Liu

Nankai University

Our goal is to construct a fully encrypted database that allows for efficient queries on ciphertext while providing strong security guarantees.

- Proposed novel encryption schemes for encrypted databases and implemented them in CryptDB.
- Collaborating with Huawei Inc. in making theoretical models practical and viable in real-world applications.
- Leveraging secure enclaves to reduce the overhead and improve the performance of encrypted databases.

Oblivious RAM and Databases Based on Secure Enclaves

August 2021 - August 2022

Research Assistant Advised by: Prof. Zheli Liu

Nankai University

Our goal is to design Oblivious RAM with the support of Trusted Execution Environment (TEE) and provide protection against access pattern leakage for the databases.

- Implemented searchable symmetric encryption for cloud file-system called SEAL using PathORAM and oblivious data structures.
- Proposed novel notions of obliviousness called *program obliviousness* for TEE-based ORAMs.
- Designed novel and light-weighted recursive doubly Oblivious RAM based on Intel SGX.

Paper in progress: SO₂: An SGX-Based Doubly Oblivious RAM with Small Client Storage.

Intelligent Service Platform for Residential Communities

March 2021 - Dec 2021

Advised by: Prof. Peng Nie

Donghui Dongrui Community, Tianjin, China

Our goal is to solve the real-world problems faced by communities consisting of senior residents.

- Developing an online platform that provides residents with one-stop services to make their lives more convenient.
- Focusing on deploying the encrypted database as the data storage and secure encryption schemes to ensure data privacy for sensitive information.

Proof of Being Forgotten: Rust-SGX based Enclave Verification Framework

August 2022 - Present

Research Assistant Advised by: Prof. Xiaofeng Wang & Dr. Mingshen Sun

Remote Intern

Our goal is to offer an off-the-shelf solution for providing users that the enclave application is verified by Proof of Being Forgotten (PoBF). It refers to a kind of regulation enforcing that code dealing with secrets is verified so that secrets are completely consumed, and no secret is leaked to any unauthorized party.

- Implementing algorithms and allocators for cleaning secret residues in Intel SGX with Rust.
- Implementing type state transfer for secrets in the enclave.
- Learning Coq to formally verify the execution model.

PUBLICATIONS

- Hongbo Chen, **Haobin Chen**, Mingshen Sun, Kang Li, Zhaofeng Chen, Xiaofeng Wang. A Verified Confidential Computing as a Service Framework for Privacy Preservation. Submitted to *USENIX Security 2023*.
- **Haobin Chen** and Siyi Lv. Revisiting Frequency-Smoothing Encryption: New Security Definitions and Efficient Constructions. Submitted to *Cybersecurity*.

TECHNICAL STRENGTHS

Website	HTML5, CSS, JavaScript, and Bootstrap
Typesetting Document	Latex, Markdown
Programming	Rust (Proficient), C/C++ (Proficient), Makefile, CMake, Coq, Shell, Java, Python, PHP, Bash
Frameworks	Google Remote Procedure Call (gRPC), Intel Software Guard eXtension (SGX), Yii2, SpringBoot, Yara, Yacc & Bison
Platforms	Linux Programming (proficient) and shell commanding
Softwares	Git, IDA Pro, OllyDbg, WinDbg, LLVM

HONORS AND AWARDS

- 2021 The 3rd prize at the **National College Student Information Security Contest**, Shandong University (Highest undergraduate contest for information security, < 8%)
- 2021 **Nankai Excellent Community Immersion Project** (< 10%)
- 2021, 2022 **Nankai Academically Excellent Student Scholarship** (Awarded to undergraduate students with excellent academic performance, < 5%)
- 2021, 2022 **Nankai Innovation Award of Technology and Research Scholarship** (Awarded to undergraduate students with outstanding research potential, < 3%)
- 2022 **Nankai Outstanding Innovation Project** (Awarded to undergraduate students who participated in outstanding research projects. < 15%)

TALKS

- 1 **Introduction to Zerocoin: An Anonymous and ZKP-Based E-Cash from Bitcoin**
Presented at course CSSE0014 *Security Protocols and Their Design*
- 2 **How Does the Compiler Work: A Brief Introduction to the LLVM Framework**
Presented at course COSC0017 *Compilers Design*
- 3 **Introduction to the Encrypted Databases**
Presented at course UPEC0990 *Database and Its Applications*

4 The Linux Kernel Fuzzing

Presented at course CSSE0004 *Software Security*

PROJECTS

- 1 FH-CryptDB (with $\sim 6,000$ lines of C++ code).
Link: https://github.com/hiroki-chen/FH_cryptDB
- 2 SSE-SEAL: An implementation of the paper *Demertzis et al. SEAL: Attack Mitigation for Encrypted Databases via Adjustable Leakage* (with $\sim 3,000$ lines of C++ code).
Link: <https://github.com/hiroki-chen/SSE-SEAL>
- 3 SO₂: A recursive doubly oblivious RAM bootstrapping on SGX. (with $\sim 4,000$ lines of C++ code).
Link: <https://github.com/hiroki-chen/SGXOram>
- 4 Inference attacks against encrypted databases.
Link: <https://github.com/hiroki-chen/FrequencyAttack>
- 5 A compiler for SysY (a C-like language).
Link: <https://github.com/hiroki-chen/NKUCompiler>
- 6 Oblivious-RAM: Reference Implementation for Different ORAM algorithms.
Link: <https://github.com/hiroki-chen/Oblivious-RAM>
- 7 NeoOS: An Unix-Like Kernel in Rust.
Link: <https://github.com/hiroki-chen/NeoOS>
